## Internships:

---

- **Soft Tech Software House:**

Back in 2021 when as a student I started my first internship with soft tech software house, where I worked in PHP, Laravel and web development at the back end. I worked there for 6 months.

- **FF Steel:**

After and Experiencing internship for 6 months i got a paid internship in FF Steel where i worked as a Data Base MIS Reporter where i used to work in DOT.NET i-e a desktop application software.

## Projects For Companies:

---

- **Backup File Software**

using this software i create backup of the original files which is uploaded in SAP Software. Reasons is that if the original file is delete so we have all ready saved that file in backup folder

- **Bulk File Remaining Software**

using this software i rename the original files to created date of the file and store the old and new name in database

- **Scale Software**

This software use for taking the weights of the materials which is load in a tractors and trucks e.g first weight and last weight . this first and last weight minus from each other the resultan weight is the material weight

- **Shift Management Software**

using this software we manage the shifts of the employee e.g Creating , updating , delete the employ's shift, and also change the shift date and time

Scale software.

## Private Projects:

---

- **Submit Assignment and Papers web App**

software is use for submitting the research papers and assignment for his personal teachers. this software. i made in soft tech software house .This software is also made in Laravel 8 and also php.

- **Doctor and patient web Application**

This software is use for between doctors and patients. patients can put the appointment for the doctor .if the doctor is conform the appointment so response back to the patients

.This software is also made in Laravel 8.

Submit assignment web application.

- **Digital Signage System web Application**

In This Application we make any type of templates after creating templates. We select some some templates and then convert to video from using applying some functionality. And show on the digital screens.

- **Tailor Software**

This software is use for measure the cloth of the customer .then the Shopkeeper insert data in this software and press add button so the data is store in database for future use and also provided the printed slip.This project is made in Dot Net.

- **Hardware Sales Web Application**

software is use for saleing the hardwares .if the material is sailed so the the sailed material is remove from the total of the all materials .This project is make in laravel 8.

- **E-Commerce web Application (only back end)**

This Software is used for saleing Things.

## Tools:

---

- **SQL Server Management Studio**

- **Visual Studio2013-22**
